Target version:	Climate Change Adaptation Module	Spent time:	0.00 hour
Resolution:			
Description			
Create the basic setup of the CCA Questionnaire			
<ul style="list-style-type: none">• Create new Django app called "cca" which will hold the configuration of the Questionnaire (similar to "technologies" or "approaches"). Place the app in the /apps folder of the project.• Create a very basic configuration for the CCA Questionnaire which contains a section (not displayed), a first category (eg. "General Information"), a first subcategory (eg. "Conditions regarding the use of data documented through WOCAT") and a first question. I would start with question 1.3 of the questionnaire which is identical to tech__1__3 of Technologies or app__1__3 of Approaches.			
This should help you to			
<ul style="list-style-type: none">• Set up of local development environment (get project running) - I think you have already done this in spring/summer.• Get familiar with the code and structure of project• Get familiar with the configuration of the questionnaires.
