Description

This is a stub, and needs discussion with the WOCAT team before implementing!

QCAT focuses on data entry only - there should be a module for analysis/reporting! Some random ideas:

- Generic reporting tool (e.g. 'show all new cases for a given date range') for deza reports or such.
- Filter-like, clickable dashboard which shows results as charts. Results can be aggregated (count, avg, ...).
- 'Prospective' usage of data is a possibility - providing users with 'best matches' according to their needs.

History
