<b>Target version:</b>	QCAT Backlog	<b>Spent time:</b>	0.00 hour
<b>Resolution:</b>			
<b>Description</b>			
<b>Problem:</b> High number of technologies with status 'Draft' only. A lot of them have practically no content. Number of such drafts with an age of more than 1 year: 627			
SQL statement:			
<pre>SELECT code,updated FROM questionnaire_questionnaire WHERE     code LIKE 'technologies_%'     AND status = 1     AND is_deleted IS false     AND version = 1     AND updated &lt; NOW() - INTERVAL '1 year'</pre>			
Explanation on conditions:			
<ul style="list-style-type: none"><li>• code LIKE ... : selects only questionnaires containing technologies</li><li>• status = 1 : Draft status</li><li>• is_deleted IS false: only versions/cases which are not deleted</li><li>• version = 1: If 'Draft' is the first version, then the technology was never published.</li><li>• updated &lt; ... : That selects only cases which have been updated/save last time more than one year ago. This can be changed to anything with days, months, years.</li></ul>			
That should be managed better. Else the database get's overloaded with bogus data.			
<b>Possible solution:</b>			
<ul style="list-style-type: none"><li>• Sending an email to compilers after a certain time, if case was not updated anymore and not submitted</li><li>• After a certain time, delete the draft cases.</li><li>• Promote the demo version for tests and trainings.</li></ul>
